

Innovation Allows Chemical Cost and Toxicity Reductions

New Software Gives Powerful Visibility Into Companies' Chemical Inventories

Lake Oswego, Ore. – Mar. 29, 2007 — Dolphin Software™, the industry-leading provider of chemical management and compliance solutions, announces the release of its Green Product Selector™ software platform. This proprietary, patent-pending innovation gives businesses unmatched visibility into their chemical inventories, allowing them to know—and control—the true toxicity and costs of their maintenance, repair and operations (MRO) chemicals.

Leveraging chemical data that companies already maintain for compliance reporting, the Green Product Selector conveniently ranks chemical products within 700 use categories. The resulting in-depth analysis ranks products—such as window cleaners, degreasers, gasket sealants, etc.—by human and environmental hazards and cost per unit. The ranking is based on data compiled from federal and international regulatory lists. Companies can also create their own watch lists, permitting them to eliminate the purchase and use of products that do not meet desired standards. Once inventory analysis is complete using the Green Product Selector, corporate decision makers can select the lower-hazard, lower-cost products they already use—greening the supply chain with no loss of product effectiveness.

“Less toxic doesn’t mean less effective. Companies are realizing that they don’t have to use chemicals that threaten worker and environmental safety,” said Mark Wysong, CEO of Dolphin Software and author of *The Nontoxic CEO*. “There are so many preferably priced, greener options on the market today. Business leaders can now effect real change in protecting people and the environment, which is also a vital concern among consumers.”

To learn more about the Green Product Selector, visit the newly launched www.dolphinsafesource.com, a website dedicated to helping companies achieve less toxic, less costly chemical inventories.

About Dolphin Software, Inc.

Since 1991, Dolphin Software (www.dolphinmsds.com) has helped global companies better manage their diverse chemical inventories. Dolphin provides industry-leading software and data management tools for companies that handle, store and use hazardous chemicals. Dolphin’s solutions have helped hundreds of companies achieve more accurate chemical inventories and better regulatory compliance. Dolphin Safe Source® (www.dolphinsafesource.com), the company’s latest program, gives companies insight into maintenance, repair and operations (MRO) chemicals’ price points and toxicity levels, helping companies effect reductions in both areas. Dolphin’s overriding mission is to promote corporate stewardship and make a global difference by protecting people, planet and profits.
